Professional Summary

Backend Software Developer with 1+ year of professional experience building scalable REST and GraphQL APIs using Python and Django, plus freelance experience delivering production systems for live clients. Experienced in AI-powered chatbot and generative AI integration (MCP, Google Gemini), database optimization with PostgreSQL and MySQL, and containerized deployments with Docker. Proficient in task queuing with Celery and Redis, API testing with Postman, and agile collaboration.

Technical Skills

- **Languages:** Python, SQL, HTML, CSS, JavaScript
- **Frameworks & Libraries:** Django, Django REST Framework, FastAPI, Celery
- **Databases:** PostgreSQL, MySQL, Redis, SQLite
- **API Technologies:** REST API Design, GraphQL, Webhook Architecture, API Authentication & Authorization
- **AI & Integration:** Model Context Protocol (MCP), Google Gemini API (Generative AI), Chatbot Architecture
- **Tools & DevOps:** Git, GitLab, GitHub, Postman, VS Code, pgAdmin, Docker, Docker Compose, Render Cloud, Gunicorn, Linux
- **Concepts:** Software Architecture, ORM, Role-Based Access Control (RBAC), Database Optimization, Debugging & Troubleshooting

Work Experience

Backend Software Developer May 2025 – Present

Axonet System, Bengaluru

- Designed and developed backend applications using Python and Django, serving production workloads for enterprise clients; built and maintained 10+ GraphQL and REST API endpoints with proper authentication, authorization, and error handling.
- Optimized complex database queries in PostgreSQL and MySQL, reducing average API response times by approximately 30%.
- Developed an AI-powered chatbot system using MCP-Server and MCP-Client architecture, enabling natural language interaction with backend services.
- Implemented asynchronous task processing using Celery and Redis for background job execution, improving application throughput.
- Containerized applications using Docker, streamlining deployment workflows across development and production.

Projects

FabricTrack — Production Management System (Freelance) *Python, Django, PostgreSQL, JavaScript*

- Built and deployed a full-stack, multi-user production tracking system for a garment manufacturing client, live since Jun 2026 on Render Cloud (Gunicorn, WhiteNoise).
- Implemented Role-Based Access Control (RBAC) across 12+ user roles, a real-time production dashboard, and a payment ledger with UPI/Cash/Cheque recording and live UPI QR code generation.
- Adapted the same architecture for a second textile-processing client, extending it into a 17-stage workflow engine with automated completion tracking.

AI-Powered Telegram Business Listing Extractor *Python, FastAPI, Google Gemini API, Telegram Bot API*

- Built and deployed a FastAPI webhook service (ASGI, Uvicorn) on Render, integrating Google Gemini (multimodal LLM) to extract structured business listing data from images, PDFs, vCards, and text sent via Telegram.
- Automated data logging to Google Sheets via the Sheets API with safe, non-destructive header handling and per-record error isolation.

Augmented Steganography for Network Peers *Python, CNN, GANs, Image Processing*

- Developed a secure data transmission application using CNN and GAN-based steganography to embed confidential information in images and audio files, improving embedding capacity while preserving file quality.

Education

Bachelor of Technology in Computer Science and Engineering 2020 – 2024

Siddharth Institute of Engineering and Technology, Puttur *CGPA: 8.3 / 10*

Training & Certifications

- **Python Full Stack Development Training** Jan 2024 – Jun 2024
  Trained in Python, MySQL, Django Framework, HTML, and worked on hands-on projects.
- **Salesforce Developer Virtual Internship** Jul 2022 – Sep 2022
  Gained experience in Apex, Visualforce, Lightning components, and CRM solution development.
